MAKING ORDINARY PLASTIC BIODEGRADABLE

To comply with ever increasing Government regulations for Going Green, we at AMK Plastics are pleased to offer you an alternative while doing our part to maintain a clean environment. We have added to our extensive product line additives that can be included at the manufacturing stage at little or no extra cost. Such additives convert everyday plastic products (made from PE, or PP) at the end of their useful life in the presence of oxygen into materials which degrade, and then biodegrade in the open environment in the same way as a leaf and leaving nothing behind – no toxic residues or fragments of plastic.

If you wish to receive more details, targeted to your specific application, please fill in the form attached so we can formulate the additive that will give you the best results.
