## VMD Dehumidifying Dryer

Advanced 3-in-1 dehumidifying dryer engineered for efficient material drying in plastic processing applications. The VMD series combines dehumidifying, drying, and conveying functions into one compact, high-performance system for maximum productivity and energy efficiency.

Integrated closed-loop design prevents external air contamination and ensures consistent, low dew-point drying performance down to  $-40^{\circ}\text{C}$ . Units feature microprocessor PID temperature control with multiple safety protections, energy-efficient bottom airflow design, and a double-insulated hopper to minimize heat loss. PLC touch screen control (optional) provides clear operational monitoring, troubleshooting guidance, and reliable, automated operation.

## WSD Hopper Dryer

Efficient hot-air hopper dryers designed to provide reliable and uniform material drying for plastic processing applications. The WSDB and WSDC series deliver consistent temperature control, durable construction, and dependable performance for daily production needs.

Compact hopper-mounted design ensures direct machine installation and stable drying operation. Units feature precision temperature control, high-efficiency blowers, and stainless-steel contact surfaces for even heat distribution and material purity. Built for durability and easy maintenance, both series offer safe, energy-efficient performance suitable for a wide range of plastic resins.
