Grinders Catalog

WSG Grinder Series

High-performance flake cutters and film granulators engineered for efficient plastic size reduction and recycling applications. The WSGP and WSGE series deliver powerful cutting performance, durable construction, and consistent output for processing film, sheet, and rigid plastics.

Robust cutting chambers with precision rotor and fixed blades ensure uniform granulation and efficient material reduction. Designed for recycling film, PE/PP materials, sheets, and profiles, these units provide strong crushing force with stable, low-vibration operation. Heavy-duty construction, reliable drive systems, and easy-access maintenance design ensure long service life and dependable daily performance.

Low Speed Granulators (TSG Series)

Low-speed granulators designed for quiet, efficient, and energy-saving plastic recycling in molding environments. The TSG series provides high torque cutting performance with minimal dust and stable operation.

Equipped with gear-driven low-speed motors and claw-type cutters, the TSG series ensures strong crushing force while reducing noise and material powdering. Precision-machined components and multiple safety protections enhance reliability and durability. Compact design allows easy integration beside injection molding machines for convenient in-line recycling.

H981A Film Grinder

Specialized film grinder engineered for efficient recycling of plastic film and soft materials. The H981A model delivers consistent grinding performance with stable operation for high-volume processing environments.

Designed specifically for film applications, the H981A features a high-efficiency cutting system that ensures uniform particle size and smooth material flow. Durable construction and precision blade configuration provide reliable performance with reduced vibration. User-friendly controls and protective systems enhance safety and ensure continuous, dependable operation.

V Series Grinder

Rugged and high-performance plastic grinders designed for efficient size reduction in a wide range of recycling and processing applications. The V Series delivers powerful cutting performance, stable operation, and reliable production quality for both in-line and batch grinding.

Equipped with precision-machined rotors and hardened cutters, the V Series ensures uniform granulation with strong crushing force and minimal vibration. Compact layout and reinforced steel construction provide long-lasting durability, easy maintenance access, and quiet operation. Advanced safety features and customizable screen sizes make these grinders ideal for processing film, sheet, pipes, profiles, and other rigid or semi-rigid plastics.
