Hopper Loader Catalog

Separate-Hopper Autoloader WSAL-700G

High-efficiency separate-hopper autoloader designed for safe and stable long-distance material conveying in plastic processing applications. The WSAL-700G combines strong suction performance with intelligent control to ensure reliable and continuous operation.

Separate main unit and hopper design enhances safety and allows efficient long-distance material transfer. The WSAL-700G operates with a high-speed carbon brush motor to provide strong suction for conveying virgin materials. All units are equipped with motor overload and material shortage alarms, easy-to-clean filter system, stainless steel hopper, and CE-certified components for dependable performance.

WSAL Serie 300G-400G

The WSAL Series Auto Loaders are designed for efficient and reliable material conveying in plastic processing applications. Featuring microprocessor-controlled operation and high-performance motors, these units ensure stable suction power, low noise, and long service life.

Compact in design yet powerful in performance, the WSAL Series improves material handling efficiency while reducing labor and downtime.
