Automatic Liquid Packer Catalog

Automatic liquid packing machine designed for efficient packaging of free-flowing liquids such as water, juice, milk, wine, and edible oils. The system provides reliable pouch forming, filling, and sealing in a compact and efficient design.

The machine forms laminated film into a tubular shape, fills the liquid product, and seals the film into individual pouches through a continuous automated process. Adjustable settings allow control of pouch length and production speed to suit different packaging requirements. Optional photo-electric sensors enable accurate print registration for pre-printed film, ensuring consistent and professional packaging results.

Specifications:

Automatic Liquid Packer Machine (Model XY)

Specs	XY/DXD
Film Developed Width (mm)	320 or 240 or 160
Packing Capacity (mL)	200-500 or 70-350 or 40-180
Production Efficiency (bags/h)	1500 or 2000
Application Voltage (V)	380 or 220
Power Consumption (Kw)	1.2
Machine Weight (Kg)	650 Approx.
Overall Dimensions (mm)	1050*750*1900
